

CANGROW

Sulphur Xtra

Cold soils release little sulphur; adding S to early spring UAN makes good sense. Use **Sulphur Xtra** in place of ATS in top-dressed UAN applications on wheat. The sulphur in **Sulphur Xtra** is 100% plant available sulphate, while ATS contains only 50% sulphate—the rest is elemental S, available very slowly.

Plant available S in **Sulphur Xtra** is boosted by Perc. Perc, with vitamins, enzymes, and amino acids, increases plant metabolism. Wheat begins the spring with extra energy that leads to more yield.

Sulphur Xtra's value is proven by increased bushels in the chart below.

	28% UAN control	28% UAN plus 5 gal ATS	28% UAN plus 5 gal Sulphur Xtra
Tavistock 105 units N total	82 bu/ac	88 bu/ac	94 bu/ac
Fullarton 120 units N total	88 bu/ac		93 bu/ac

Sulphur Xtra adds bushels!
